echogenicity

PID Mapping

Scanning Cornwall's Hearts

Echogenicity is a Community Echocardiogram Service. We provide the GP's of Cornwall with a direct access adult echocardiography service. All of Echogenicity's echocardiogram reports are stored on a secure network managed by Cornwall IT. Echogenicity also uses a digital online secure icloud where all patient referral, echo reports and consultant letters are stored.

Our PID mapping is as follows:

The GP refers a patient to our service. A Proforma and ECG are emailed to the Referral Management Service via the Choose and Book System.

⬇

Echogenicity Admin Staff 'Accept' the patient On the Choose and Book System. Using an Ecrypted computer.

⬇

The referral details are electronically uploaded onto TM3 via an encrypted computer.

⬇

A confirmation letter for the appointment is sent to the patient in a windowed envelope via Royal Mail.

⬇

All Clinic lists are emailed to the appropriate echocardiographer via secure NHS email.

⬇

A patient attends his/her clinic appointment. Reports are stored with the images and onto a USB Pen.

⬇

At the end of the clinic the echo reports are loaded onto TM3 via a secure portal, via an encrypted computer. USB pen is erased.

⬇

The admin staff then print out the referral details and echo reports and hand deliver them to our cardiologist.

⬇

Once the dictation is complete it is Sent via NHS email to our secretary Who types the consultant letters and then emails them via NHS email with the Accompanying echo report to the requesting GP and any other Consultant who requires a copy.

⬇

All paper reports and referral details are Hand collected by our admin staff, Shredded and incinerated.
